

Lifting and Safety Solutions for Manufacturing

Maximising uptime safety and flow across production and logistics

At Certex UK, we specialise in delivering advanced lifting, inspection, and safety solutions designed specifically for today's fast-paced manufacturing facilities and automated warehouse environments. Whether you're moving raw materials, finished goods, or managing high-density storage systems, our services are built to uphold safety, ensure compliance, and optimise operational efficiency at every stage of your workflow.

Maintaining Safety in High-Volume, High-Speed Operations

One of the major challenges in modern manufacturing and logistics is maintaining safety in high-volume, high-speed operations. Facilities are under pressure to meet stringent safety standards while running continuously.

Certex UK supports this through LOLER and PUWER-compliant inspections to certify all lifting and mechanical handling equipment. We also offer non-destructive testing and magnetic rope testing (MRT), which help identify hidden defects without disrupting day-to-day operations.

To further strengthen safety culture, we provide operator safety training that covers safe lifting, slinging, equipment handling and pre-use inspection routines.

Handling a Wide Range of Loads

Handling a diverse range of loads—often with irregular shapes or delicate materials—demands adaptable and specialist equipment. We supply a wide array of slings, hoists, and lifting beams, all configured for varied applications from machinery parts to palletised stock.

Our custom lifting attachments are designed for complex or repetitive lifting needs, while vacuum lifters and gripping systems offer safe handling for sheet goods, panels and fragile materials.

Integrating with Automation and Smart Warehousing Systems

One of the major challenges in modern manufacturing and logistics is as automated warehouses and smart factories expand, lifting and safety systems must integrate seamlessly with robotics, conveyors, and digital workflows.

To support this, we offer compact hoists and crane systems designed specifically for tight spaces and automated processes. Our smart load monitoring solutions and sensors enable real-time data capture, system alerts and smooth integration with control platforms. For more complex requirements, we develop custom-engineered handling systems in collaboration with automation integrators.

Reducing Downtime and Improving Equipment Availability

Equipment failure can bring operations to a halt, so keeping lifting gear in optimal condition is critical.

We provide planned preventative maintenance to extend equipment lifespan and minimise disruption. Our 24/7 wire rope monitoring systems offer continuous, real-time alerts as conditions change, helping avoid unexpected breakdowns.

Digital asset management tools make it easy to track inspection schedules, certifications, and service history in one centralised platform.

Enhancing Ergonomics and Reducing Manual Handling Risks

Without proper support, manual handling can lead to fatigue and injury—especially in semi-automated environments. Our ergonomic solutions, including jib cranes and lightweight gantries, improve safety and mobility at workstations.

Manipulator arms and assist lifts ease the strain of repetitive or delicate tasks, while tailored lifting setups are designed around your specific workflow and space, helping to boost both comfort and efficiency.

Our Products and Services

Lifting Equipment and Solutions

- High Performance Crane Rope
- Steel Wire and Textile Slings
- Chain Slings and Accessories
- Electric Hoists, Jib Cranes, Gantries and Mobile Handling Systems
- Vacuum Lifters, Grippers, Magnet Lifters and Manipulators
- Load Restraint and Cargo Securing
- Spreader beams and frames
- Bespoke Designed and Engineered Lifting Solutions
- Magnetic Rope Testing Equipment (MRT)
- Load Monitoring Devices and Smart Sensors

Inspection and Certification

- Inspections of Lifting and Safety Equipment to LOLER and PUWER
- Non-Destructive Testing (NDT)
- Magnetic Rope Testing (MRT)
- Load Testing and Certification
- Digital Asset Management

Maintenance and Repairs

- On-Site Equipment Servicing
- Crane Rope Replacement and Lubrication
- Preventative Maintenance Programs

Training and Consultancy

- Crane Steel Wire Rope Inspection
- Lifting Equipment Examination
- Cargo Carrying Unit (CCU) Container Pre-Trip Inspection
- Harness and Lanyard Inspection
- Appointed Person for Lifting Operations
- Crane Supervisor
- Lifting and Slings
- Introduction to LOLER and PUWER eLearning
- Wire Rope Socketing
- Forklift and Telehandler Examination

Why Choose Certex UK?

- ✓ Trusted Experts in Industrial and Logistics Lifting
- ✓ Fully Certified and Accredited Services
- ✓ Scalable Solutions for Growth and Automation
- ✓ High-Quality, Reliable Products
- ✓ Emergency Coverage and Support

Build a safer, more efficient manufacturing or warehousing operation.

Get in touch with our expert team today.

Our smart load monitoring solutions and sensors enable real-time data capture, system alerts and smooth integration with control platforms.
